Software Engineer with more than 5 years of experience, specializing in the development of robust, scalable, and secure applications in cloud and DevOps environments. With strong expertise in Java / Spring Boot and C# / .NET, I design high-performance backend solutions while also proficient in modern frontend development using Angular and TypeScript.

Experiences

NOVEMBER 2025 – PRESENT

Lead Technology & Product Development Consultant | STARZ GROUP DEVELOPMENT

As Lead Technology & Product Development Consultant, I am in charge of directing overall technology strategy, software development, and system architecture across the organization. I oversee end-to-end product design, guide technical dev teams, and align IT systems with business goals while enforcing strong operational support and internal control frameworks.

NOVEMBER 2024 – NOVEMBER 2025

Team Lead | BML BUSINESS CENTER SARL

As a Team Lead, I managed a team of 3 to 5 developers, overseeing project planning, code reviews, upskilling, and the technical leadership of critical projects. I played a key role in improving code quality, reducing time-to-market, and fostering a culture of technical excellence within the team.

Project Highlights:

I led the development of a comprehensive marketplace platform featuring three distinct portals (Customer, Seller, and Management). In addition to designing user interfaces and implementing business logic across all portals, I was fully responsible for integrating the payment systems. This included:

- **Stripe integration for credit card payments:**
 - Implemented secure checkout using the Stripe .NET SDK with card token handling.
 - Created dynamic server-side (.NET) payment sessions, including cart validation, fee calculation (VAT, commissions, shipping), and redirection to the Stripe interface.
 - Implemented Stripe webhooks to handle payment-related events (successful payments, failures, disputes).
 - Managed order status updates on the server side based on events returned by Stripe.
 - Set up Stripe payout systems for Sellers during transaction reconciliation.
- **Flexpay API integration for Mobile Money payments (M-Pesa, Airtel Money, Orange Money):**
 - Set up a USSD-initiated payment flow, dynamically generating payment instructions via the Flexpay API.
 - Handled asynchronous payment confirmations through a real-time SignalR WebSocket session.
 - Automatically recorded proof of payment and reconciled transactions.

DECEMBER 2023 – NOVEMBER 2024

Software development engineer II | BML BUSINESS CENTER SARL

As a Software Development Engineer II, I built and deployed scalable full-stack web applications using .NET, Angular, and TypeScript in a remote, Agile, and DevOps-driven environment. My daily work heavily relied on Microsoft Azure, including Azure DevOps for project management and CI/CD, Azure Pipelines for automated deployments, and the Azure Portal for managing cloud infrastructure and services.

DECEMBER 2019 – DECEMBER 2023

Fullstack Engineer | Wolf company Sarl | Kinshasa, Drc

As a Fullstack Engineer, I contributed to the development of web and mobile applications by combining frontend, backend, and mobile technologies. My role involved designing and implementing features across the entire tech stack, using C# / .NET, Java / Spring Boot, Angular, and Android SDK, within an Agile environment focused on performance, maintainability, and user experience.

Project Highlights:

I designed and developed a web application for the Hydrochemistry and Environment Laboratory at the University of Kinshasa, aimed at centralizing, managing, and analyzing water quality data. The solution was built to establish a standardized scientific database, accessible through a user-friendly interface and supported by a secure backend.

Technical & Functional Highlights:

- Relational database (SQL Server) structured around physicochemical, chemical, biological, and environmental parameters of water samples.
- Responsive web interface developed with Angular for data entry, consultation, and updates by laboratory staff.
- Secure REST API protected by JWT (JSON Web Tokens), developed in .NET Core, to ensure interoperability and secure data access from front-end clients.
